SOURCE (OR PART OF THE FOLLOWING SOURCE):

Type	Dissertation
Title	Gamma-ray burst afterglows from jet simulation to light curve
Author	H.J. van Eerten
Faculty	Faculty of Science
Year	2010
Pages	117

Contents

1 Introduction **1**
1.1 General introduction 1
1.2 Gamma-ray bursts 2
1.3 Thesis outline 10

2 Gamma-Ray Burst afterglow scaling coefficients for general density profiles **15**
2.1 Introduction 15
2.2 Description of the post-processing code 16
2.3 The inclusion of electron-cooling 19
2.4 Scaling coefficients 20
2.5 sharpness of broken power law 22
2.6 application to GRB 970508 23
2.7 Summary and discussion 25
2.8 Appendix A: Derivation of emitted power per electron 26
2.9 Appendix B: Emitted power with electron cooling 28
2.10 Appendix C: Derivation of Scaling coefficients 31
2.11 Appendix D: The hot region 32

3 No visible optical variability from a relativistic blast wave encountering a wind-termination shock **35**
3.1 Introduction 35
3.2 Initial conditions 37
3.3 Light curve and shock profile 38
3.4 Resolved blast wave versus homogeneous slab 39

3.5 The reverse shock contribution 42
3.6 Summary and conclusions 44

4 Gamma-ray burst afterglows from trans-relativistic blast wave simulations 45
4.1 Introduction 46
4.2 The radiation code 47
4.3 Fluid dynamics 53
4.4 Spectra and light curves 60
4.5 GRB030329 69
4.6 Summary and conclusions 73
4.7 Acknowledgements 76
4.8 Numerical implementation 76
4.9 Applicability of our model 81

5 Afterglow jet breaks 85
5.1 Introduction 85
5.2 Jet breaks are chromatic 87
5.3 Optically thin blast waves and break times 88
5.4 jet breaks at different frequency ranges 92
5.5 jet breaks from a 2D simulation 95
5.6 Summary and conclusions 97
5.7 Acknowledgements 100

6 Epilogue 101

7 Samenvatting in het Nederlands 105
7.1 Gammaflitsen en nagloeiers 105
7.2 De vuurbal 106
7.3 Swift en openstaande vragen 107
7.4 Dit proefschrift 108

Dankwoord 111
