SOURCE (OR PART OF THE FOLLOWING SOURCE):

Type	Dissertation
Title	Quantum field dynamics and the 2PI effective action
Author	A.X. Arrizabalaga
Faculty	Faculty of Science
Year	2004
Pages	160

Contents

1. Introduction 9

1.1. Early universe . . . 10

1.2. QCD and relativistic heavy-ion collisions . . . 12

1.3. Problems in perturbation theory at finite temperature . . . 14

1.3.1. 2PI resummation schemes by example . . . 18

1.4. Problems of perturbation theory out of equilibrium . . . 20

1.5. Outline of the thesis . . . 23

2. Equilibrium and nonequilibrium field theory 25

2.1. Closed time path formalism . . . 25

2.2. Propagators and Self-energies . . . 27

2.2.1. Propagators . . . 28

2.2.2. Self-energies . . . 30

2.3. Equations of motion . . . 31

2.4. Equilibrium . . . 33

2.4.1. Free theory and real-time Feynman rules . . . 34

2.4.2. Imaginary time formalism . . . 37

2.5. Close to equilibrium: Transport equations . . . 38

2.5.1. Kinetic equations . . . 40

2.5.2. Damping rate . . . 40

2.6. Damping and quasiparticles in $\varphi^3 + \varphi^4$ theory . . . 41

3. Divergences in the classical approximation 53

3.1. Introduction . . . 53

3.2. Classical approximation and perturbative expansion . . . 56

3.3. Linear divergences and HTLs . . . 58

3.4. Logarithmic divergences . . . 60

3.5. Transversality of classical divergences . . . 61

4. 2PI Effective action 65
4.1. 2PI effective action . . . 66
4.1.1. 1PI effective action and Schwinger-Dyson hierarchy . . . 66
4.1.2. 2PI effective action . . . 69
4.1.3. Φ-derivable approximations . . . 70
4.1.4. Relation with Schwinger-Dyson equations . . . 72
4.2. Properties of 2PI resummation schemes . . . 75
4.2.1. Conservation of energy in Φ-derivable approximations . . . 76
4.3. Vertices and Bose symmetry . . . 78
4.3.1. Φ-derived vertices . . . 79
4.4. Renormalization . . . 83
4.5. nPI effective actions . . . 85
4.A. Derivation of the 4PI effective action . . . 88

5. Symmetry aspects of the 2PI Effective action 91
5.1. Broken symmetries and Goldstone's theorem . . . 92
5.1.1. Truncated 2PI effective action . . . 93
5.2. Φ-derivable approximations in gauge theories . . . 96
5.2.1. Yang-Mills theory, gauge-fixing and BRST invariance . . . 96
5.2.2. Gauge-fixing dependence of the 2PI effective action . . . 98
5.2.3. Gauge-fixing dependence of Φ-derivable approximations . . . 101
5.2.4. Choice of gauge condition . . . 102
5.2.5. Conclusions . . . 103

6. Non-equilibrium dynamics with the 2PI effective action 105
6.1. Thermalization in scalar $\varphi^3 + \varphi^4$ theory in 3+1 dimensions . . . 105
6.1.1. 2PI loop expansion of scalar $\varphi^3 + \varphi^4$ . . . 106
6.1.2. Equations of motion . . . 107
6.1.3. Numerical analysis . . . 109
6.2. Phase transition dynamics in the $O(N)$ model . . . 117
6.2.1. The model . . . 118
6.2.2. Spinodal instabilities . . . 119
6.2.3. 2PI effective action and $1/N$ expansion . . . 121
6.2.4. Equations of motion . . . 126
6.2.5. Numerical implementation and results . . . 129
6.3. Conclusions . . . 132

Bibliography 134

Samenvatting 151

Resumen 155
