SOURCE (OR PART OF THE FOLLOWING SOURCE):

Type	Dissertation
Title	Study of strongly correlated systems by means of B-splines
Author	G.C. Verbockhaven
Faculty	Faculty of Science
Year	2000

Contents

1 Introduction **9**
- 1.1 General introduction 10
- 1.2 The B-spline basis 11
  - 1.2.1 Definition and properties 12
  - 1.2.2 Parameters 15
  - 1.2.3 Completeness of the B-spline basis 16
- 1.3 Theoretical approach 18
  - 1.3.1 Configuration state functions 18
  - 1.3.2 The single-particle problem 19
  - 1.3.3 The multi-electron hamiltonian matrix 26
  - 1.3.4 Diagonalization of the hamiltonian 31
  - 1.3.5 Perturbative corrections 33
- 1.4 Influence of the basis 34
  - 1.4.1 Completeness of the orbital basis 34
  - 1.4.2 Basis dependence of the calculations 36
- 1.5 Decay processes 37
  - 1.5.1 Transition probability 37
  - 1.5.2 Autoionization width 39
  - 1.5.3 Non-orthogonalities 39
- 1.6 Integration procedures 40
  - 1.6.1 Gaussian integration 40
  - 1.6.2 Finite difference method 41
  - 1.6.3 Difference between the two methods 42

2 Study of valence states in neutral Ca **43**
- 2.1 Introduction 44
- 2.2 Calculational approach 45
- 2.3 Convergence of the B-spline expansion 48
  - 2.3.1 Neglecting part of the basis 49
  - 2.3.2 Changing the size of the basis 51
- 2.4 Results and comparisons 53
  - 2.4.1 Comparison with experiment 53
  - 2.4.2 Comparison with other theoretical approaches 59
- 2.5 Wavefunction compositions 65
- 2.6 Electric dipole transition probabilities 70
  - 2.6.1 Influence of core polarization 70
  - 2.6.2 gf values 71
  - 2.6.3 Lifetimes 78
- 2.7 Conclusions 80

3 Singular value decomposition **83**
3.1 Motivation 84
3.2 Singular value decomposition 84
3.3 Applications 85
3.4 Analysis 89
3.5 Conclusions 90

4 Study of doubly and triply core-excited states in Li I **91**
4.1 Introduction 92
4.2 Theoretical background 93
4.2.1 Description of hollow states 93
4.2.2 Description of continuum states 94
4.2.3 Interaction with the continuum 95
4.3 Energies 95
4.3.1 $2l2l'nl''$ states 97
4.3.2 $3l3l'nl''$ states 101
4.4 Autoionization widths 103
4.4.1 Autoionization of $2l2l'nl''$ Rydberg series 103
4.4.2 Comparison with other data 115
4.4.3 Autoionization of $3l3l'nl''$ states 120
4.5 Conclusions 121

5 Study of singly-core excited states in Li I, Be II and B III **123**
5.1 Introduction 124
5.2 Theoretical approach 125
5.3 Energies 126
5.3.1 Li I 126
5.3.2 Be II and B III 134
5.3.3 Comparison with the saddle-point method 135
5.4 Autoionization widths 136
5.5 Conclusions 139

6 Study of multiply-excited states in N III and N V **141**
6.1 Introduction 142
6.2 Differences between doubly- and triply-excited states 143
6.3 Theoretical approach 144
6.4 Li-like nitrogen, N V 145
6.4.1 $1s2lnl'$ doublet states 145
6.4.2 $2l2l'nl''$ doublet states 151
6.4.3 $3l3l'nl''$ doublet states 151
6.5 Be-like nitrogen, N IV 154
6.5.1 Optimization of the potential 154
6.5.2 Valence states 155
6.6 B-like nitrogen, N III 157
6.6.1 Valence states 157
6.6.2 Core-excited states 159
6.7 Conclusions 162

7 Study of multiply-excited states in Ar^{15+} **163**
7.1 Introduction 164
7.2 Description of the method 164
7.3 Results 166
7.3.1 Singly core-excited states 166
7.3.2 Doubly and triply core-excited states 168
7.3.3 Decay rates 170
7.4 Conclusions 176

8 Appendix **177**
8.1 Appendix I: Numerical illustration of the SVD 178
8.2 Appendix II: *B*-splines distribution pattern 180

9 References **183**

10 Summary **195**
10.1 Summary 196
10.2 Samenvatting 201

11 Thanks to **205**
