Acknowledgements

I am indebted to all persons who contributed, directly and indirectly, to the realization of this thesis.
A few of them I would like to mention: Prof. dr. K-H. Kurth for his unflagging motivation to realise this thesis, which did not cease after I left the Academic Medical Centre in Amsterdam in 1995; dr D.H.J. Schamhart for teaching me how to perform standard laboratory techniques like cell culture, RIA or ELISA and for showing me how to make something out of chaos; dr. E.C. de Boer for her helpful critical remarks in interpreting the tests results; P. Vos for having inspiring discussions, ranging from the feasibility of a double fluorescence technique to paintings of Willink, while performing much of the laboratory tests described in this thesis; Col. D.S. Gerretse, commander of the Central Military Hospital, for giving me support and the opportunity to continue my scientific activities during the Utrecht period; and finally Prof. drs. J. Zwartendijk who persuaded me that I should not get attached to much to being "drs.".
