ERRATUM: "SOME CONSTRAINTS ON THE EFFECT OF AGE AND METALLICITY ON THE LOW-MASS X-RAY BINARY FORMATION RATE" (ApJ, 589, L81 [2003])

Arunav Kundu, Thomas J. Maccarone, Stephen E. Zepf, and Thomas H. Puzia

The number of low-mass X-ray binaries in NGC 4365 that are within 0".5 of a globular cluster and considered to be matches is 18, not 23 as mistakenly reported in the first paragraph of § 3. The correct number is used elsewhere in the above Letter. The fraction of low-mass X-ray binaries that are associated with globular clusters in NGC 4365 is indeed 40% as noted later in the same paragraph. We thank W. Lewin for alerting us to this error.
